HTC

Checkpoint

Why use a Speedgate?

fast, up to 10x faster than other gate types.

security, short opening & closing time prevents for unsecure situations

safety, the Speedgate is a autonomously operating installation that has been tested in accordance with EN13241-1

24/7 support, the speed gate is equipped with IOT equipment to enable remote diagnosis by the HTC specialists and to directly support local maintenance personnel in performing maintenance or solving mal-functions

high security vehicle access for temporary sites

A secure vehicular entrance must protect the area to which it provides access just as much as the fence surrounding it. For a temporary location, the entrance must also be able to be realized quickly and function reliably.
Checkpoint is an 20' container equiped with an heavy Speedgate to protects sites against insight, burglary, small arms fire and vehicles and is operational within an hour

Dutch Army
HTC has developed Checkpoint for operations in conflict areas. The mobile access is used by the Army and has the interest of Police as well as humantarian aid organisations. In 2018 HTC received an award from the Dutch Minister of Defence, in recognition of its contribution to the innovation of the Army.
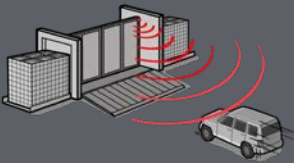

MAKING AN ENTRANCE

Checkpoint
