

Xentry Mobile

immediate an safe and unobstructed access

The Xentry Mobile protects a vehicle entrance or passage of 4m or 8m against unwanted access by people and regulates traffic.

The Xentry Mobile is equipped with all necessary sensors to be able to close safely and quickly after every passage of a vehicle. Including the striking red LED strips instead of traffic lights.

What is unique is that no connection is required to the other side. While the product still complies with standards (EN13241). This provides unobstructed access to vehicles, which is very robust to disruption.

The product is “plug & play” and can be placed directly on a road or site by one person, connected and put into operation within 30 minutes.

The Xentry Mobile is equipped with a control box in which access control systems can be installed or the connection to a wired remote control can be made.

The carrier can optionally be equipped with sensors for license plate recognition and horizontal radar for “free exit”. Access control systems with wired controls, handheld transmitter or mobile phone app are also optional.

With a Xense Service subscription you receive 27/4 support in operational management and HTC service ensures a long lifespan.

Why a Speedgate?

fast, up to 10x faster than other port types.

safety, short open and closing time prevents driving and walking and therefore theft

safe, the Speedgate is one working autonomously installation that has been tested in accordance with EN13241-1

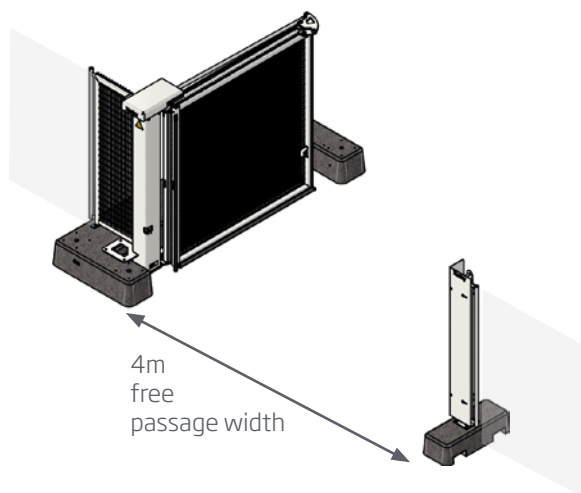

unmanned, access provision increases flow and reduces costs.

24/7 support, remote diagnostics & support with Xense, ensure high availability and satisfied users.

configurations

Xentry Mobile stand-alone

The Xentry Mobile can close a single lane or street of 4m. Together with a closing post, the Speedgate can be included in an uninterrupted fencing.

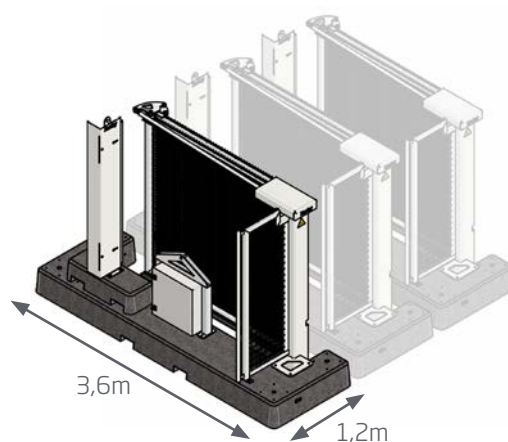

However, the Speedgate can also “close” against any surface such as a building or a “porter’s box”.

storage & transport

The Speedgate and closing post can be transported as one whole.

They can be picked up with a crane (one lifting point) and a forklift truck.

When folded, the panels do not extend beyond the concrete support. The Speedgates can therefore be stored very compactly.

Xentry Mobile double

An assembly forms an 8.3 m wide passage, through which trucks with a semi-trailer or trailer can drive diagonally. An assembly then works like a “normal” double Speedgate. An assembly can also be used to form a separate and create entrance and exit..
