Xentry Mobile

Smart Security for Temporary Sites

The Xentry Mobile provides secure and controlled vehicle access across a 4.1-metre-wide entrance, helping prevent unauthorized pedestrian access.

After each car or motorcycle passes through, the Speedgate closes automatically and quickly. Advanced laser detection also makes it ideal for trucks and trailers.

For wider entrances, two Xentry Mobile units can be linked to secure an access width of up to 8.2 metres, operating together as one seamless system.

Why a Speedgate?

Fast Up to 10× faster than conventional gates.

Safety Fast operation helps prevent tailgating and unauthorized access.

Safe The Speedgate operates autonomously and is certified in accordance with EN 13241

Low operating costs Smart design, high performance, long service life and efficient maintenance

24/7 Support Remote diagnostics and support with Xense ensure high availability and satisfied users.

MAKING AN ENTRANCE

Xentry Mobile - Innovation in Storage, Installation, Operation & Service

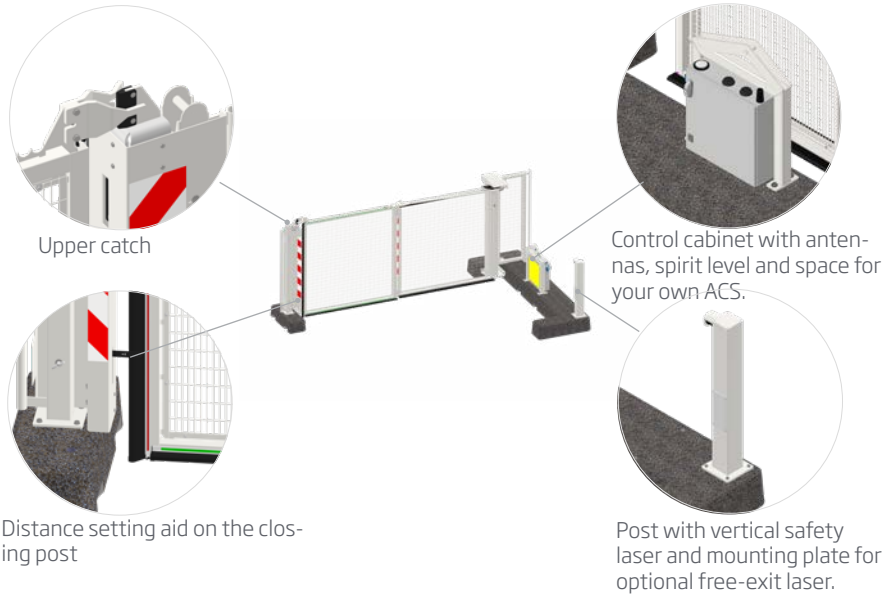

Storage & Transport

Storage: When folded, the panels remain within the footprint of the concrete base.
Handling: Easy to move by crane using a single lifting point, or by forklift.

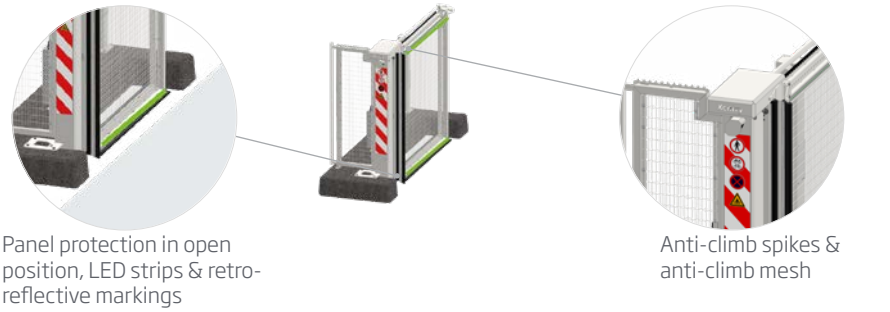

Installation

Positioning: Can be positioned by one person using the integrated handling features on the base and closing post.
Configuration: Easily configured on site. Space in the control cabinet, an optional front post and rear mounting plate enable plug-and-play installation.

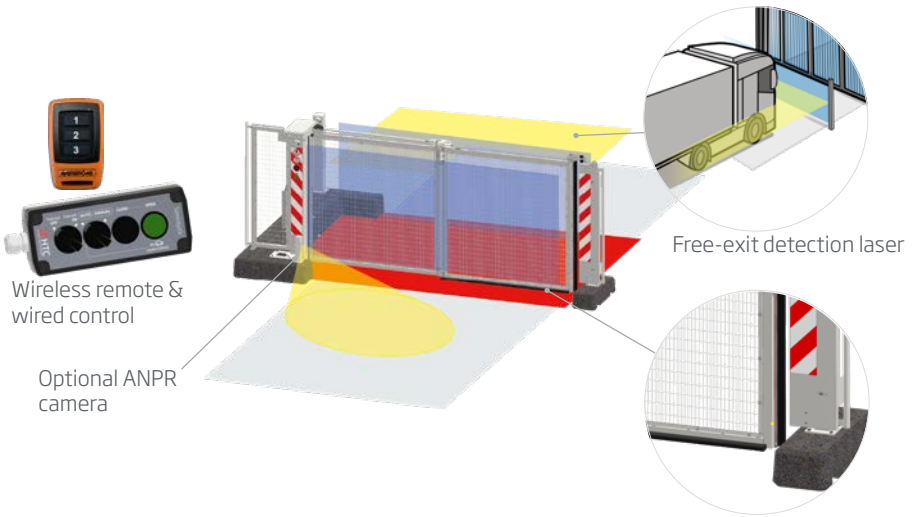

Operation

Visibility: Retro-reflective markings and bright LED strips ensure clear visibility and intuitive operation.
Security: Anti-climb mesh and anti-climb spikes on the panels help prevent unauthorized access.
Protection: When open, the panels are protected within their own base structure.
Support: 24/7 support with Xense and service team.

Control & Safety

Opening: own Access Control System (ACS), supplied wired controls, Tell app, wireless remote control, licence plate camera or free-exit laser detection.
Closing: Automatically after passage, after a preset time or via the ACS.
Vehicle & pedestrian safety: Lasers protect the red safety zone in combination with safety edges.
